WORLD OF CENTRAL VENTILATION

KOMFORT ROTO EC D

Suspended central air handling unit with rotary heat exchanger

The central units of the "Roto" series are equipped with a highly efficient rotary heat exchanger which recovers humidity especially well and scores with a high frost resistance. In this way the KOMFORT Roto EC D units provide a comfortable indoor climate and full performance, even in cold regions. Additionally, the built-in control board S21 enables comprehensive settings, control via mobile app and integration into Smart Home Systems.

+++++++ Good to know +++++++

This is how the rotary heat exchanger works:
The warm extract air flows through the lamellar structure and warms it. The heat exchanger continues to turn, meets the cold intake air and transfers the stored heat to it. Due to the continuous rotation, the air flows are only in short contact with the heat exchanger. Thus the air humidity does not condense, but is recovered instead.

Advantages of the rotary heat exchanger:

- no condensation
- comfortable indoor air humidity
- very low freezing probability
- no additional heating of the supply air needed, even at low temperatures
